

## **Triad Rooftop Solar Energy System**

---

In October 2009, Highwoods Properties' Enterprise Park II building, located in Greensboro, NC, was selected as one of four sites to have solar energy systems installed on their rooftops as part of the first phase of Duke Energy's distributed solar generation program in North Carolina.

Enterprise Park II was selected based on its ready access to the electrical grid and solar productivity potential.

The North Carolina Solar Photovoltaic Distributed Generation program, approved by the NC Utilities Commission earlier this year, enables Duke Energy to install solar panels on the roofs and properties of manufacturing facilities, commercial buildings and homes in the company's North Carolina service territory.

Duke Energy will invest approximately \$50 million to construct and own a total of 10 megawatts of solar energy capacity in the state, capable of providing electricity to approximately 1,300 homes.

The installation at Enterprise Park II was completed in March 2010.

You've come to the right place.™
